## ANTI RUST

**RIPO - WHEN CORROSION STRIKES (RUST INHIBITING PENETRATING OIL)**

Hard wearing, heavy duty coatings to protect against corrosion - Don't replace it... Repair it.

# RIPO - WHEN CORROSION STRIKES (RUST INHIBITING PENETRATING OIL)

The name says it all. This incredible product penetrates into rust, and takes the two major players out of action, moisture and oxygen, thereby stopping the whole process in its tracks. It also adds strength to the rusted surface by curing up to a hard surface.

Altex products are simple and easy to use boasting the following:

## FEATURES

- ✓ Ease of use
- ✓ 3 stage application
- ✓ Simple brush/roller application
- ✓ High grade finish
- ✓ Long service life
- ✓ Process time is 3 days (a coat per day)

## PROCESS

Follow the below process for a DIY system to repair and protect your rusted steel corroded equipment from rust.

### 1 SURFACE PREPARATION

Wash and degrease surface first. Wire brush, abrade or grind existing rusted surface. The more corrosion you remove, the better. Any tightly adhered rust may remain.

### 2 PRIMING & UNDERCOATING

Apply coat of **ALTEX RIPO** to the prepared surface, **ALTEX RIPO** will penetrate through the corrosion to the steel.

Undercoat with **ALTEX HIGH BUILD RUST BARRIER**

### 3 FINISH COAT

Finishing with a top coat of **ALTEX ISOTAL ENAMEL** Routine maintenance, cleaning and servicing, little and often will catch problems before they become major.
